## Patient Partners (7)

# Objectives of the Project

The overarching aims of this large consortium are to **integrate sex and gender dimensions** in applied health research, to evaluate their impact on **clinical** cost-sensitive outcomes and **patients reported outcomes** (PROMs) related to quality of life in **Non-Communicable Diseases** (NCD)

- ✓ **30 Cohorts**
- ~ **30 Million of patients**
- ✓ **30 Investigators**
- ✓ **5 Countries**
- ✓ **4 Main clinical areas**

**Cardiovascular disease**

**Metabolic disease -  
Diabetes**

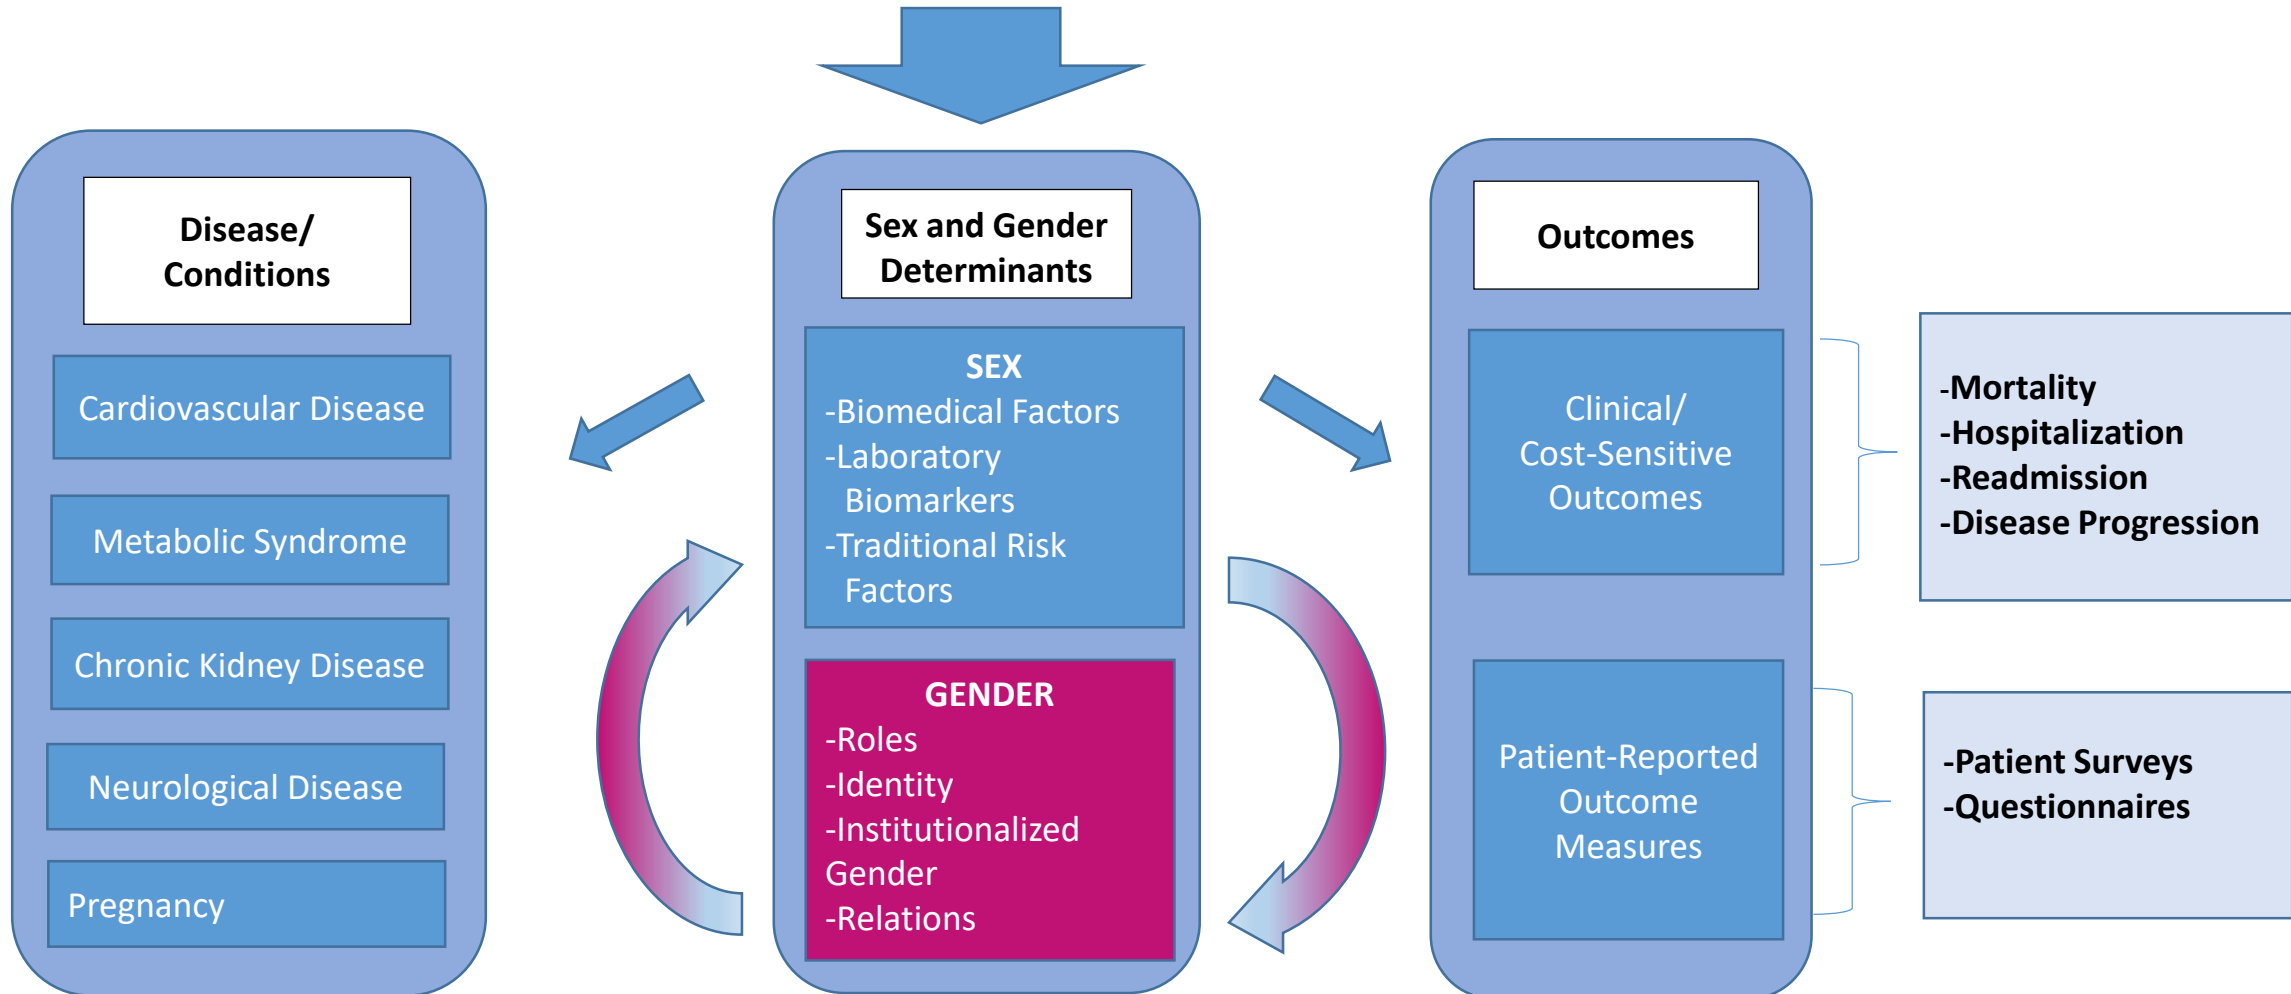

**Chronic Kidney  
Disease**

**Neurological  
Disease**

# Conceptual Framework

## Equity + Diversity + Inclusion

# Main Deliverables

- ✓ **Build capacity in the value of sex and gender science and knowledge translation**
- ✓ **Measure gender: the GOING-FWD Methodology**
- ✓ **Perform Big Data Analysis with Innovative Analytic Tools for comparison across datasets and countries**
- ✓ **Apply gender methodology to better understand non communicable chronic diseases (and COVID-19)**

# Main Deliverables

- ✓ **Build capacity in the value of sex and gender science and knowledge translation**
- ✓ Measure gender: the GOING-FWD Methodology
- ✓ Perform Big Data Analysis with Innovative Analytic Tools for comparison across datasets and countries
- ✓ Apply gender methodology to better understand non communicable chronic diseases (and COVID-19)

## **Building capacity in the value of sex and gender science**

- GOING-FWD Investigators and Co-Investigators (**n=12**)
- POST-DOCTORAL FELLOWS/Early career research (**n=9**)
- Masters/PhD students (**n=15**)

## **Knowledge translation**

- GOING-FWD Website (<https://www.mcgill.ca/going-fwd4gender/>)
- Social Media: YouTube, Twitter, Twitter Webinar and Facebook
- Over **50 abstracts**; Poster and Oral Presentations (National and International)
- **54 manuscripts published** in relation to Sex and Gender measurement
- **12 manuscripts** in relation COVID and Sex and Gender

# GOING-FWD Framework and Methodologies and Innovative Analytic Techniques May INFLUENCE POLICY AND CLINICAL PRACTICE Fostering Sex and Gender Equity in Health

## MEET THE METHODS SERIES: METHODS FOR PROSPECTIVELY AND RETROSPECTIVELY INCORPORATING GENDER-RELATED VARIABLES IN CLINICAL RESEARCH

GOING-FWD Team: Louise Pilote, MD, MPH, PhD; Valeria Raparelli, MD, PhD; and Colleen M. Norris, RN GNP, PhD

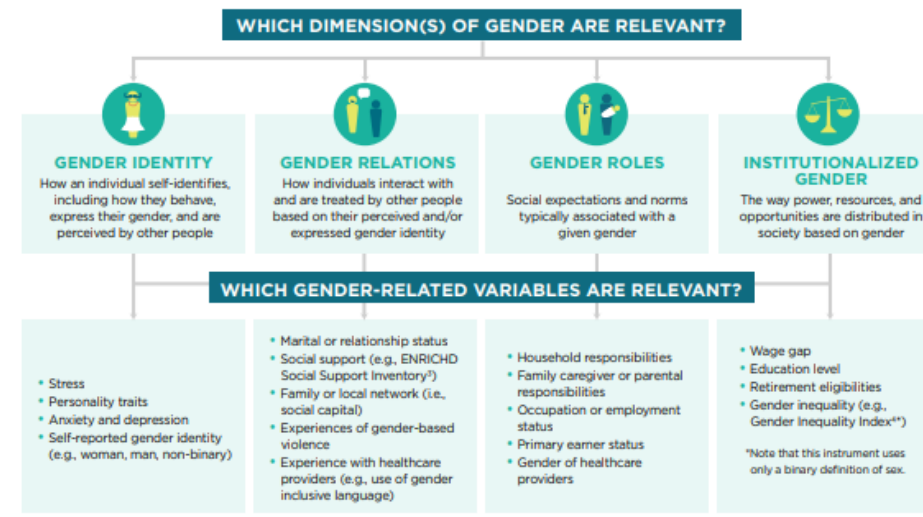

**Gender Outcomes International Group: to Further Well-being Development** (GOING-FWD) is a data science and personalized medicine project funded by CIHR and **GENDER-NET Plus**, which uses data from over 30 million patients with chronic disease across Canada and four European countries. The project is led and coordinated by Louise Pilote, MD, MPH, PhD, a researcher at the McGill University Health Center Research Institute and a James McGill Professor of Medicine at McGill University. Co-leaders are Valeria Raparelli, MD, PhD, Assistant Professor of Internal Medicine at the University of Ferrara (Italy), and Colleen M. Norris, RN GNP, PhD, Professor of Nursing, Medicine and Public Health Science at the University of Alberta. In this Meet the Methods sheet, Louise Pilote, Colleen M. Norris, and Valeria Raparelli discussed methods for prospectively and retrospectively integrating gender-related variables in clinical research.

### DECIDING WHICH GENDER-RELATED VARIABLES ARE RELEVANT TO YOUR CLINICAL STUDY

#### What is a gender-related variable?

A gender-related variable is a non-biological variable which differs in terms of magnitude, prevalence, and/or impact

between people of different genders. Gender can be broken down into four dimensions: gender identity, relations, roles, and institutionalized gender<sup>2</sup>. A gender-related variable may fall under any of these domains. Researchers may want to focus their inquiries on a single dimension, or measure variables across multiple dimensions. Below are a few gender-related variables you may want to consider. Find more examples of gender-related variables [here](#)<sup>2</sup>.

## G20 meeting in Rome – Official Presentation to G20 Representatives/other Stakeholders at EU and country level

# Main Deliverables

- ✓ Build capacity in the value of sex and gender science and Knowledge translation
- ✓ **Measure gender: the GOING-FWD Methodology**
- ✓ Perform Big Data Analysis with Innovative Analytic Tools for comparison across datasets and countries
- ✓ Apply gender methodology to better understand non communicable chronic diseases (and COVID-19)

# Gender Wish List

## Demographics

Age  
Date of Birth (DOB)  
Sex  
Ethnicity  
Language  
Country of residence  
Country of Origin  
Province/Region  
Ethnic background of parents  
Rural/Urban Status  
Country of Birth/ Birth place  
Current living situation (with partner, parents, etc.)  
Postal code  
Address

## Gender Roles

Primary earner status  
Employment Status  
Occupation  
Work hours per week  
Level of responsibility for disciplining children  
Number of hours per week spent on housework  
Status of household's primary responsibility  
Number of children  
Social status

## Gender Relations

Marital/Relationship Status

### ***Social support***

ENRICH social support instrument  
Availability of Caregiver  
Medical Outcomes Study (MOS)  
Social Support Survey

## Institutionalized gender

Educational Level  
Number of years of schooling

## SES/Income

Monthly finances  
Household income  
Investments (stocks, bonds etc.)  
Perceived Social Standing  
GII (Gender inequality index)  
Type of maternity care

## Gender Identity

### **Stress**

14-Item Perceived stress scale (PSS)  
Stress level at work  
Stress level at home  
Stress management  
Wellness

## Personality traits

Emotional intelligence  
BEMS (instrument)  
Marlowe-crowne question (assesses personality, temperament, and demeanor)

## Depression/Anxiety

Patient Health Questionnaire-9  
HAD Scale - Hospital Anxiety and Depression Scale  
Anxiety/Depression  
Anxiety sensitivity question  
Beck depression inventory question  
Pill question (?)  
Tas questions (?)  
State-Trait Anxiety Inventory (STAI) (quantifies adult anxiety)  
Beck anxiety inventory question

## Other psychiatric

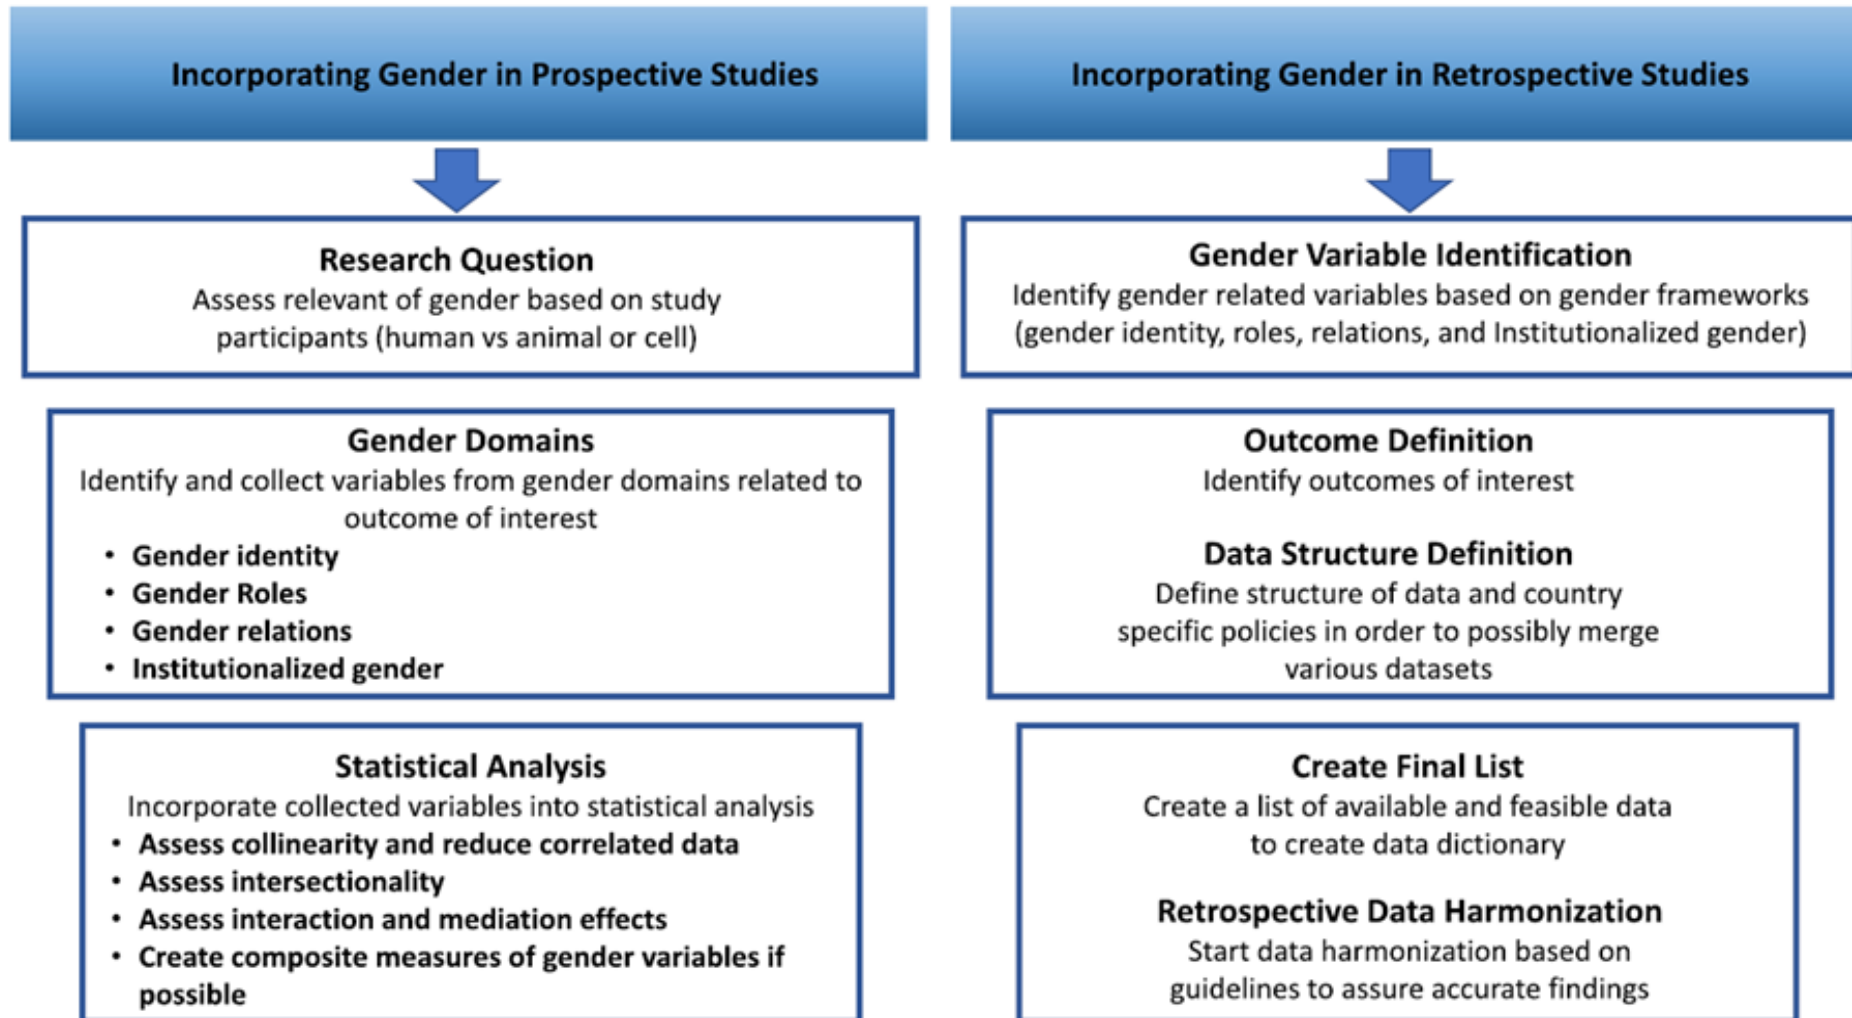

### **questionnaires**

Whiteley index questions (assesses hypochondria)

### **Discrimination**

Day-to-day experiences

### CONCLUSIONS

Sex-specific risk patterns of COVID-19 test positivity exist, with gender-related factors being more relevant in females and biological factors in males.

# Using GOING-FWD Methodologies to Identify SEX and GENDER Factors Associated with Outcomes

# Heat Map Plot: Country- and Sex-related Differences in the Prevalence of HTN

## Legend

Cold colours  
**Min: Dark Blue**  
 indicate low prevalence

Hot colours  
**Max: Dark Red**  
 indicate high prevalence

**Women living in Central-East and Southern Europe had a greater prevalence of hypertension compared to Men**

# Country-Gender Interactions

*Significant interaction between socioeconomic status (SES) and sex in country-stratified analysis*

- More evident in **central-east** and **southern countries** vs **Northern, Western Nations and Canada**
- **Women with lower SES, income, education > HTN**
- **Women who were divorced or widowed > HTN, any country**
- **Immigrants > HTN**
- **Northern and Southern Europe < HTN vs central-east region**

## Average prevalence in Women

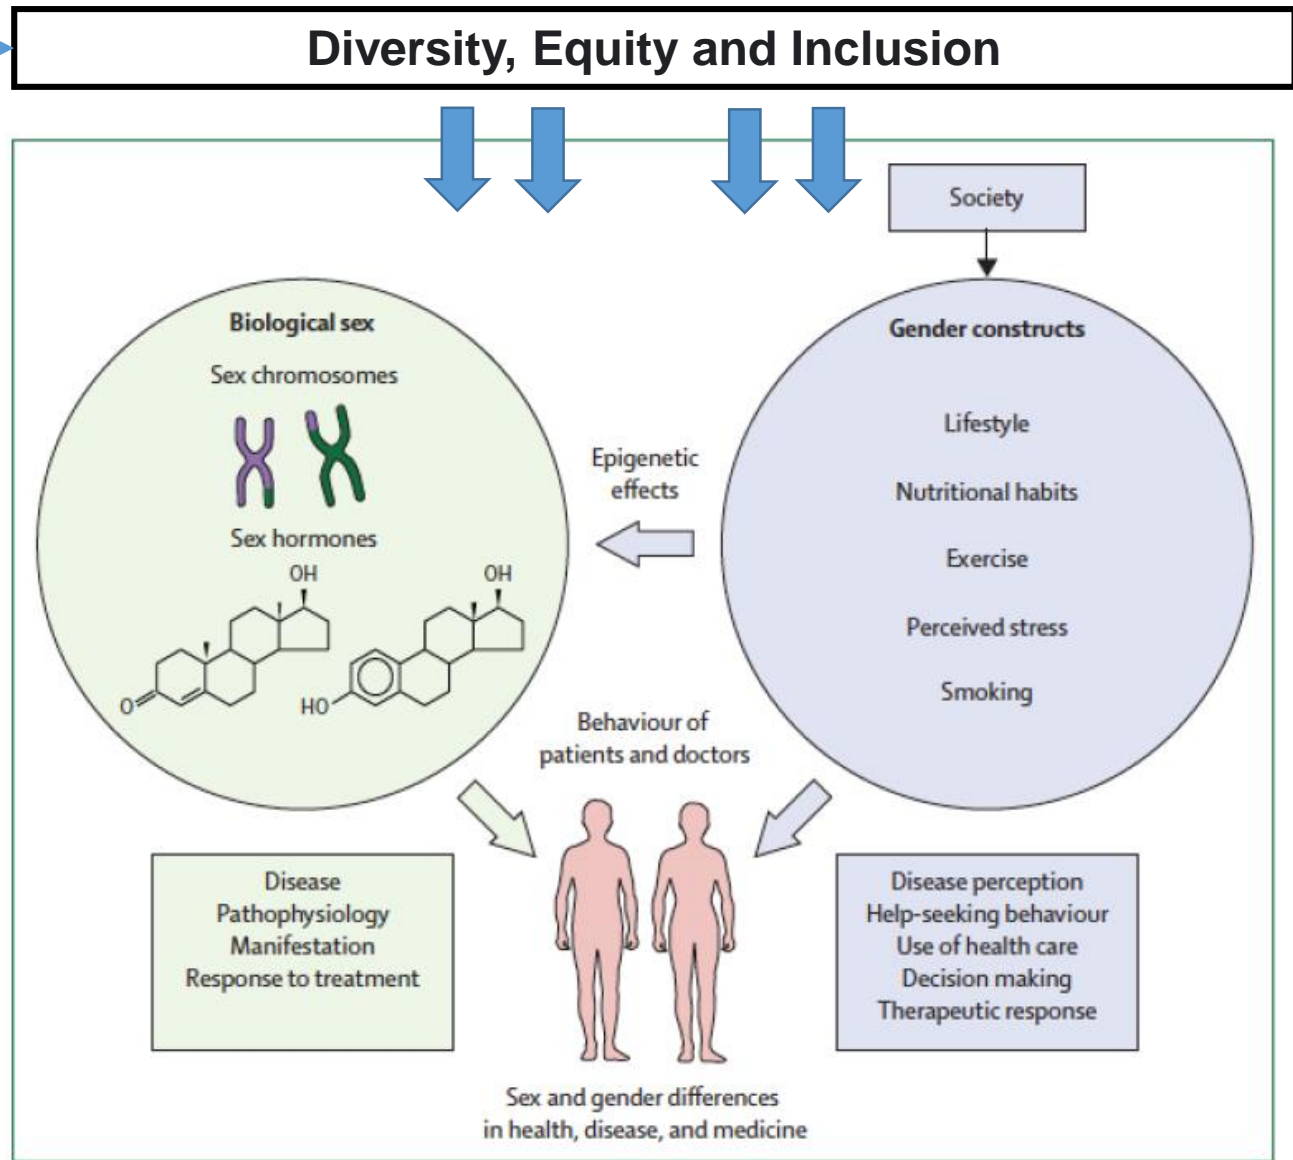

# PART “DEUX”- NEXT STEPS

- ✓ Tailored solutions to measure the unique sex and gendered factors of women, men and gender-diverse people
- ✓ Developing Sex and Gender tools for integration in health policy, clinical practice guidelines
- ✓ Moving to developing sex and gendered based interventions to improve outcomes
- ✓ Multidisciplinary and intersectional approach in providing clinically relevant solution to Canadian and European citizens

# Conceptual Framework for GFW for Gender in Health

EQUALLY RELEVANT FOR HEALTH

Sex and Gender Interact and cross talk

Mauvais-Jarvis et al. Lancet 2020; 396: 565–82

Precision Medicine/health/innovations for health care

Now this is not the end.

It is not even the beginning  
of the end.

But it is, perhaps,  
the end of the beginning.

*Winston Churchill*
